

WATER SYSTEM

The Vision:

The water towers are UCA's beloved icon and for 76 years they have served as UCA's source of water. But now they are wearing out. The inside coating on the walls has worn away, and the walls are becoming pitted. The maintenance crew has already repaired a few small leaks.

The State Health Department has given us until 2025 to have a new water system up and running. We will recoat the exterior of the old towers and keep them for nostalgic purposes, but they will be retired from active service.

The Proposed New Water System:

- ✔ Will be concrete towers
- ✔ Located behind the principal's home, at the highest point on campus
